

PHENOLIC GRP

DATASHEET

The Safest Option

GRP made using Phenolic resin is the latest and strongest version to date and can be found in the most hostile of environments including oil refineries, oil platforms, underground mining, railways and in shipping. It has the **maximum** fire resistance and emits little smoke or toxic fumes when burning – critical in enclosed spaces. Its reinforced structure can take exceptional loads – useful where large, uninterrupted spans need to be bridged.

There is a new fire rating for Phenolic grating and profiles – **ASTM F-3059, L2** (New USCG standard) this replaces PFM2-98 (Old USCG standard).

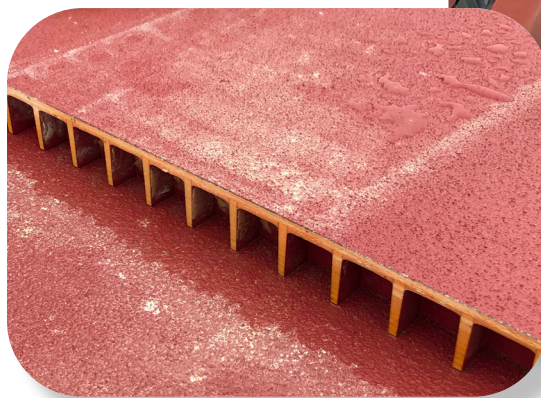

All our Phenolic GRP is a **Class 0** rated material.

DeckSafe now has its own GRP pultrusion factory, based just one mile away from our office in Suffolk. This enables us manufacture fully bespoke Phenolic GRP profiles to meet specific customer requirements.

We can supply and install:

- Phenolic GRP grating in all panel sizes, thicknesses and RAL colours
- Phenolic GRP profiles (Box, Angle, Channel, Beams)
- Phenolic GRP solid top panels in all panel sizes, thicknesses and RAL colours
- Phenolic GRP SafeRail handrail system

DeckSafe has now completed a full supply and install project for an offshore platform – including a suspended solid top walkway, ladders, staircases, lifeboat platforms and pipe support.
